

ENHANCED FEATURE  
ABRASIVE BELT GRINDER

# MODEL 760E

7211007 shown

- Running indicator light
- 30mm mushroom stop button
- Positive door guard switch
- Additional contact wheel coverage
- Rapid-Stop Braking™ technology
- American designed and manufactured in Warsaw, Missouri

## THE 760E FEATURES ALL OF OUR REGULAR 760 FEATURES PLUS ENHANCED FEATURES YOU'VE REQUESTED

The 760E with Rapid-Stop Braking™ will activate the brake and stop the machine in just seconds when either the red mushroom stop is activated or the door is opened.

With the addition of the switch, wired directly to the controller, it prevents operators from leaving the door in an open position while running. The door must be closed to activate the belt grinder.

We understand with a machine that runs as quiet and smooth as a Burr King grinder, sometimes in a shop environment it is nearly impossible to tell if the machine is running or not. The visual run indicator light, located on top of the controller, reduces the chance of an operator leaving the machine running when finished with the operation, or when they leave the working area. The run indicator light can be seen while the whisper of the machine can not be heard.

The 960-250 and the 960-400 can also be outfitted with these enhanced features. Please contact your manufacturing representative or Burr King Manufacturing for more information.

### 742-6 WHEEL COVER

The 742-6 covers nearly all of the side of the wheel. It is also adjustable for 1.5" or 2" wide contact wheels.

**NOTICE:** It should not be implied that the 960E is a safer machine to operate or to own than the standard 960 belt grinder. The "760 Enhanced" has features that Burr King customers have suggested us adding. It must be understood improper uses of any equipment may be dangerous. Please read and understand all operating instructions. USE PROPER EYE, FACE, HAND AND BODY PROTECTION WHEN USING THIS OR ANY OTHER GRINDER.
